

NANO EXCEL for HERBICIDE ADJ.

This proprietary adjuvant is specifically engineered from the ground up, which safely improves the performance and efficiency of applied glyphosate and 2,4-D herbicide products.

- Beneficial when dealing with stubborn burn-down issues
- or off-label weed control products
- helps to optimize the over-all performance of the host formula (Herbicide) by fusing the existing micro-particles into a synergistic relationship.

Applications:

- ❖ NANO EXCEL ADJ. is designed to be added directly to the spray tank. In a typical application the proper mixture of glyphosate or 2,4-D would be added to the appropriate mixture of water along with the desired ratio of NANO EXCEL ADJ.
- ❖ Apply 4-6 ounces of NANO EXCEL ADJ. per acre of application regardless of the water amount applied per acre and/or herbicide application rate per acre.
- ❖ For weeds that exceed the herbicide labels recommendation and harder to control weeds an application of 7-10 ounces of NANO EXCEL ADJ. per acre may prove beneficial.

KEEP OUT OF REACH OF CHILDREN!

This product is designed exclusively for industrial use by trained personnel. Manufacturer will not be responsible for any injury, loss, or damage if product is used in any manner not in compliance with label directions or if precautions are not observed.
